

So you want a web page

Here is what you need:

- **Sketch your idea on paper**
- **Come up with a Domain Name that is unique**
- **Come up with a web hosting provider (like Bee.Net) 610-280-2274**
- **Ask your hosting provider to register your domain Name**
- **Either find someone to create your web page OR**
- **Purchase software to create one (such as Dreamweaver) This software works similar to Word (what you see is what you get)**
- **You will also need a free program called Cute FTP to transfer your work to the host computer**

You typically will pay about \$15 a year to have and keep your Domain Name registered

Web Hosting typically is about \$40 a month. There are some server farms out there charging less, but you get what you pay for.
